ARCOS CONFORT SYSTEM

Arcos Confort is developed to give you a comfortable house with the possibility to control it as easy or advanced as you like.

What is the Arcos Confort system?

The system consist of floorheating/cooling, airheating/cooling, a central computer system and thermostats with a build in humidity sensor in each room.

What does it do?

Floorheating/cooling is by far the most comfortable way to keep your house at the desired temperature. That makes that Arcos Confort will always try to use the floor to get/stay on the desired temperature.

Floorheating is at times not fast enough to follow your desires. In that case the airheating will help the floor to get to the desired temperature. Once this temperature is reached the airheating will stop.

In summer the humidity might get higher than is comfortable. The floor-cooling is not able to lower the humidity. If this happens the aircooling takes over until the humidity is back to comfortable levels.

The aircooling will also help the floor when the floor does not have enough cooling capacity.

How does it work?

In every room there is a thermostat. On the thermostat there is a button that you can turn. Set in the middle the computer will keep this room at 21 degrees. Between the first of July and the first of September 23 degrees. You can lower the setting with a maximum of 3 degrees by turning the button anti clockwise and raise the temperature by turning clockwise.

Can I access the computer?

It is possible to use a webbrowser to get in to the computer. Once connected you are able to not only change the desired temperatures but also switch off specific rooms, switch off the airheating/cooling in certain rooms or set the system in holiday mode. In holiday mode the temperatures will be set 5 degrees lower in winter and higher in summer. That way you save energy without risk of your house getting too cold (damp) or too hot.

You can also access the memory of the computer and see what the temperatures or the humidity have been the last month in each room.

To be able to access the computer it must be connected to your internal network by connecting it to the router/switch. If you want to reach the computer from anywhere in the world you must make some settings to the router to allow it to access the Arcos Confort system. We will gladly help you with advise how to change these settings.

In the next pages you will find a brief explanation of how to use the access by webbrowser.

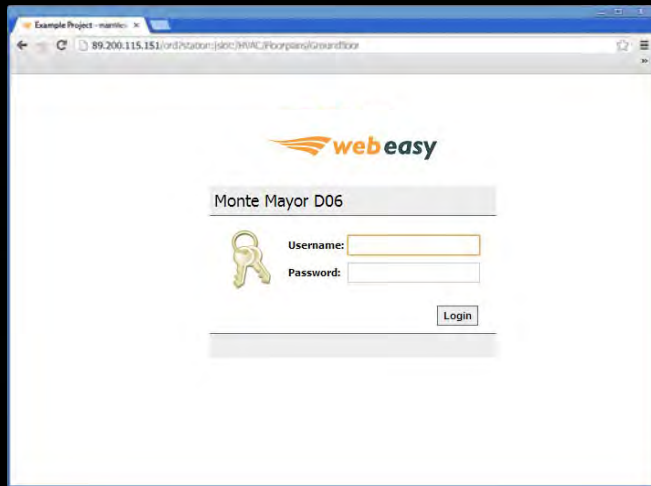

turn the button to lower or raise the temperature

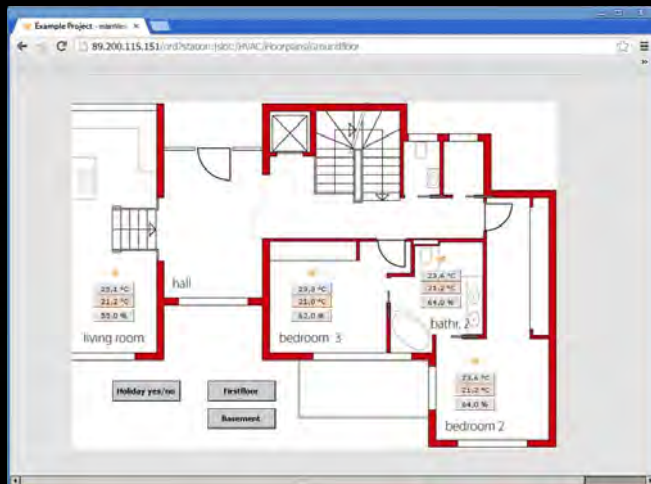

HOW TO ACCES

Type the IP-adress of your system in the browser. You will be directed to the inlog screen.

Just type your **username** and **password** in the dialog boxes , than push the **login** button. The system will open.

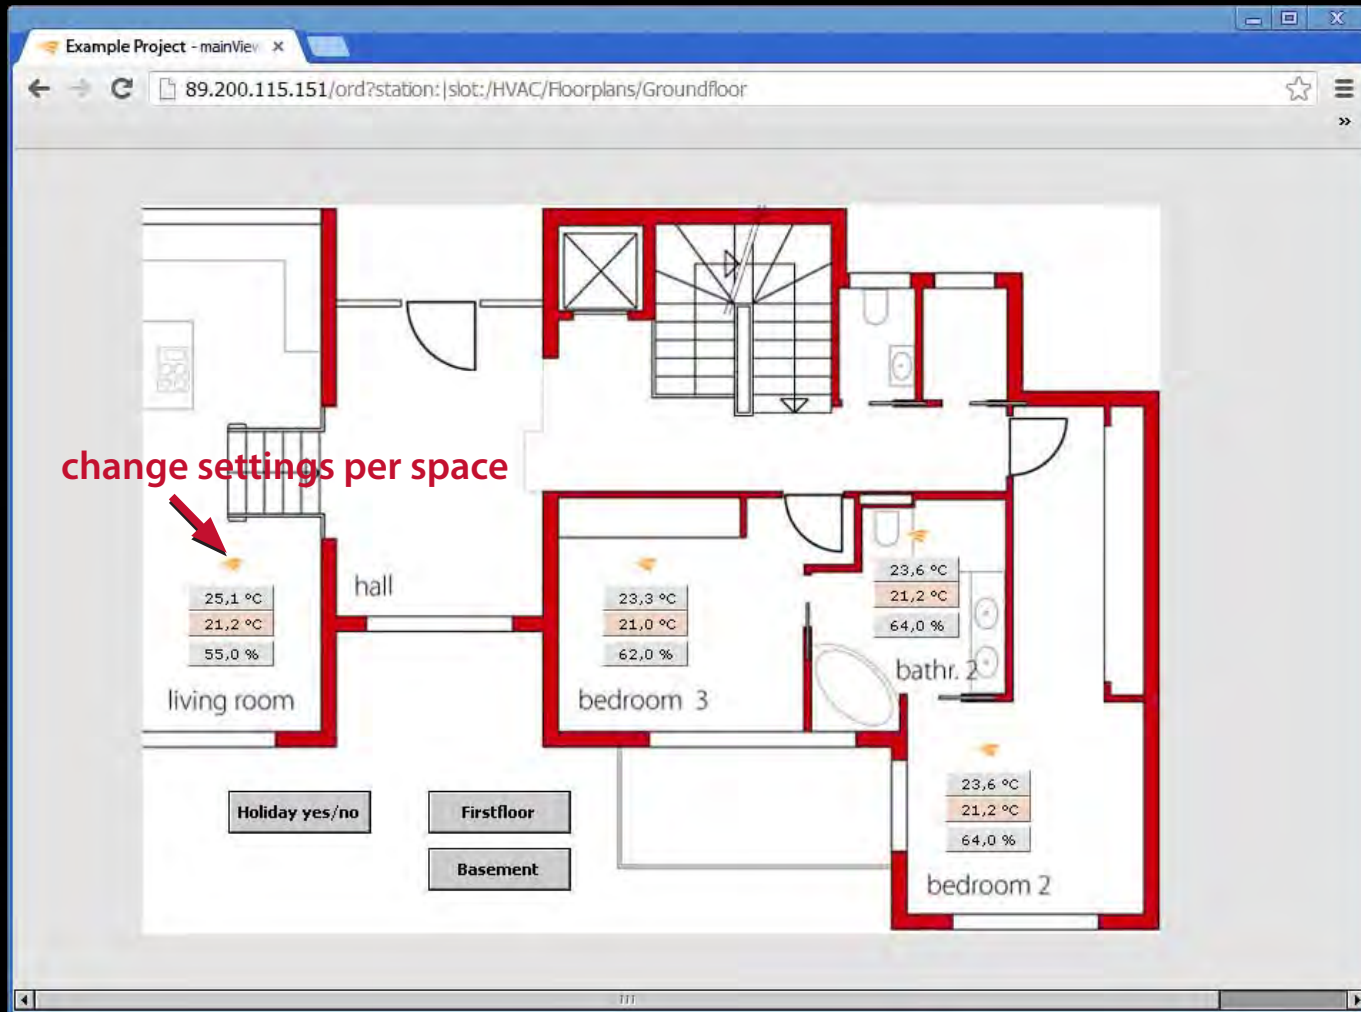

inlog screen

opening screen

CHANGE THE SETTINGS PER SPACE

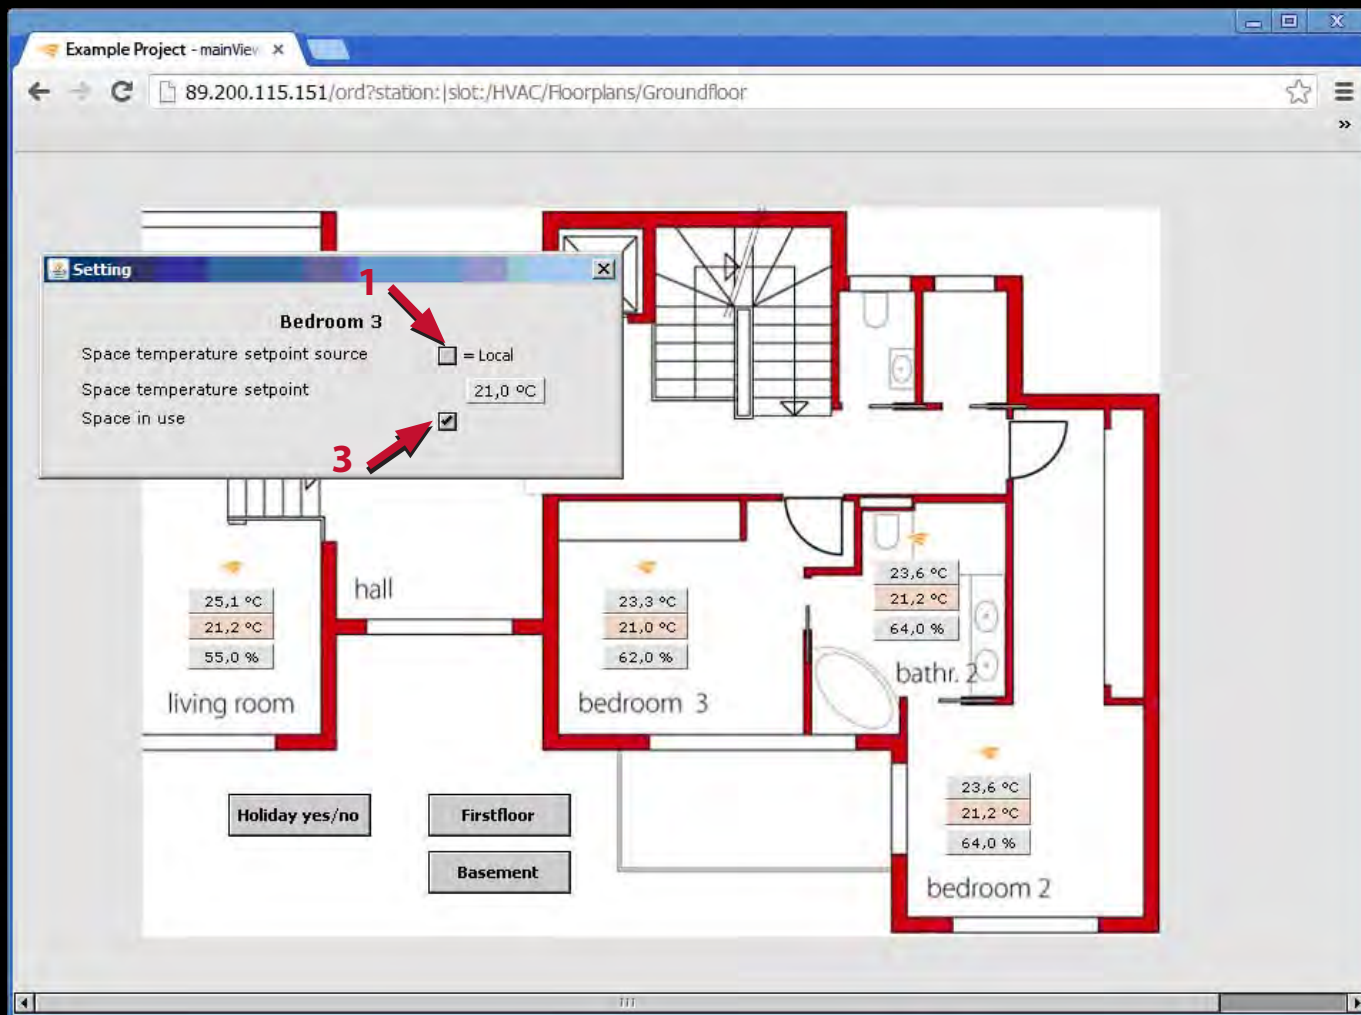

You can change the settings of the system very easy.

Per space

If you want to lower or raise the temperature just push the logo  above the temperature and humidity boxes

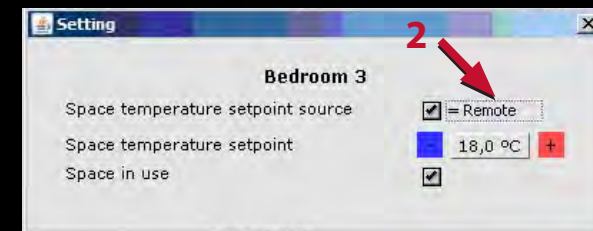

Change settings per space

Change temperature

After you pushed the logo  the dialogbox appears.

When you push the checkbox *local* (1), behind the *space temperature setpoint source* you go to the remote mode (2) and you can change the temperature by clicking + or -: the red or blue checkbox.

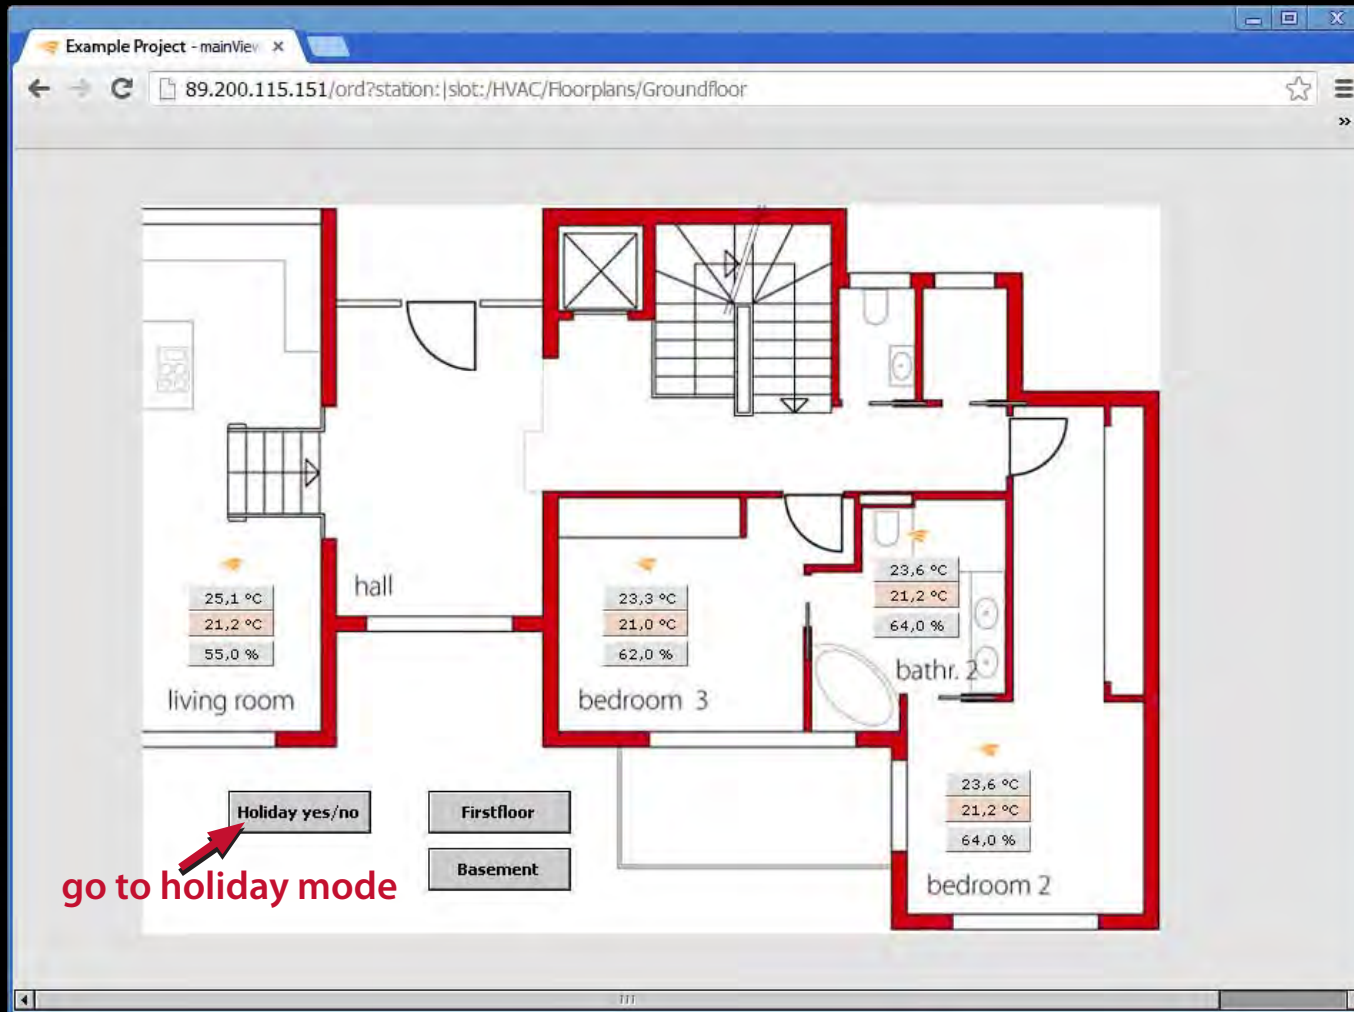

Switch on/off

To switch off the heating or cooling in the room you only have to push the checkbox behind *space in use*. (3)

The temperature will be changed by 5 degrees.

HOLIDAY MODE

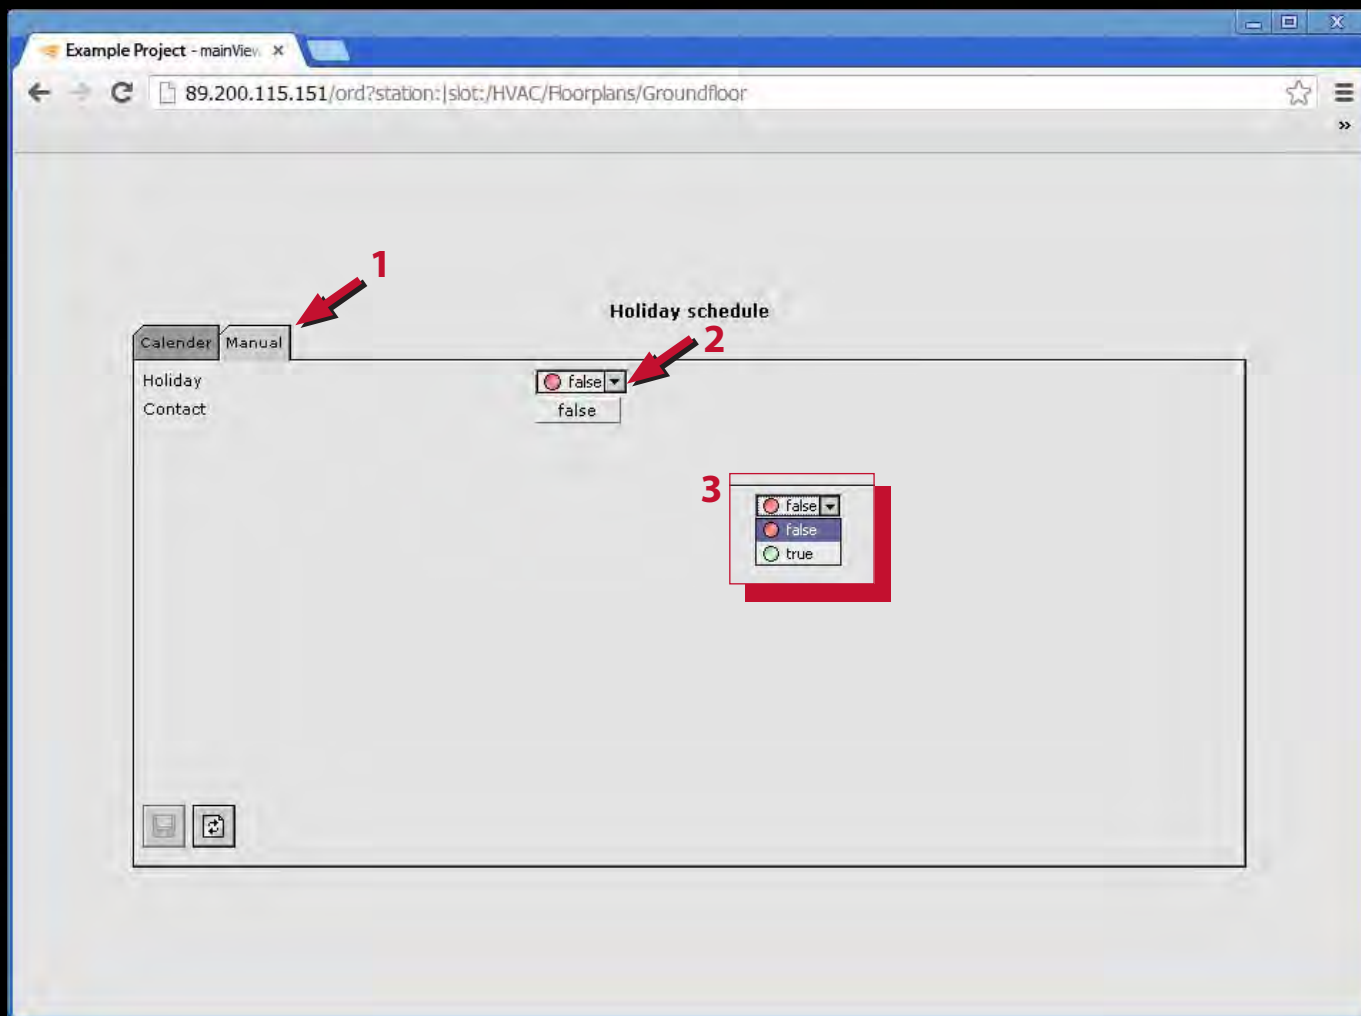

Holiday mode

Press **Holiday yes/no** to switch off the system when your on holiday or just a few days away from home.

In this screen you can also switch off the system for a period or single day After you pressed the checkbox **Holiday yes/no** you go to the screen: **Holiday schedule**.

Holiday schedule manual

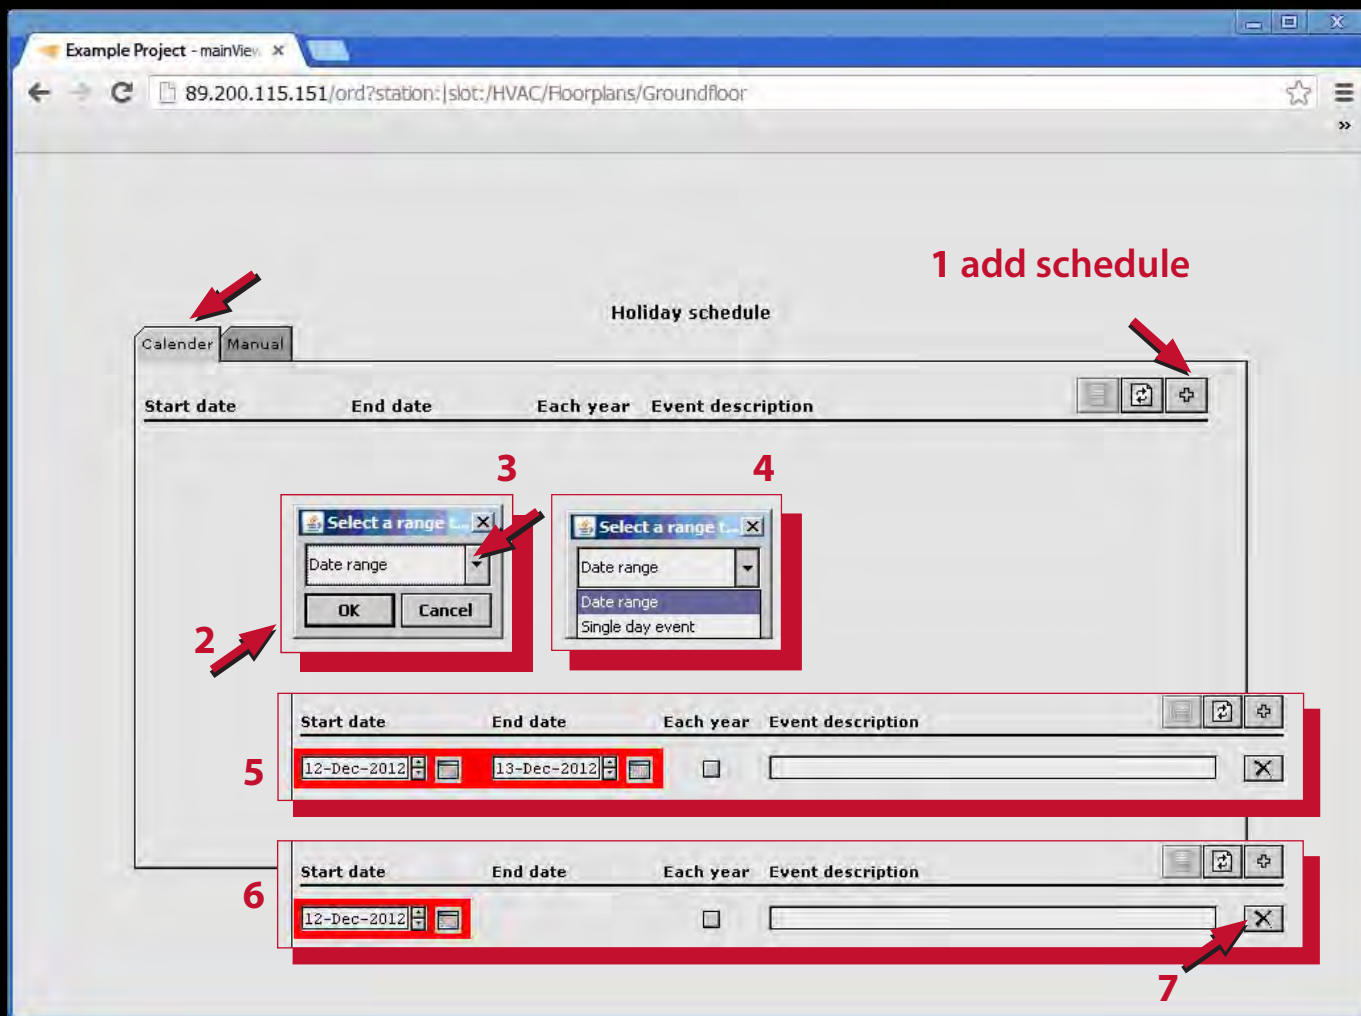

Switch system on/off

Go to the folder 'Manual' (1) when you want to turn off the system.

By pushing the checkbox behind false (2) the dialog box (3) opens. Choose true to turn the system off. If you want to turn the system on again choose false.

Holiday schedule by calendar

Calendar

Go to the folder 'Calendar'. In this screen you can switch off the system for a period or single day.

By pushing the + (1) the dialog box (2) opens. Here you can choose for a date range (3) or a single day. (4)

By pressing OK at your selection you go either to screen (5), when you want to select a date range, or to screen (6) when you want to put the system off for just one day.

By pushing the X (7) at the end of the selection line you can delete your selection.

ACCES VIA SMART PHONE

Access via smart phone is also possible. Please consult us if you would like to use this possibility.

CONTACT

This manual consist of only the basic information.
If you want to know more about the possibilities of the Arcos Confort system do not hesitate to contact us for more details.
